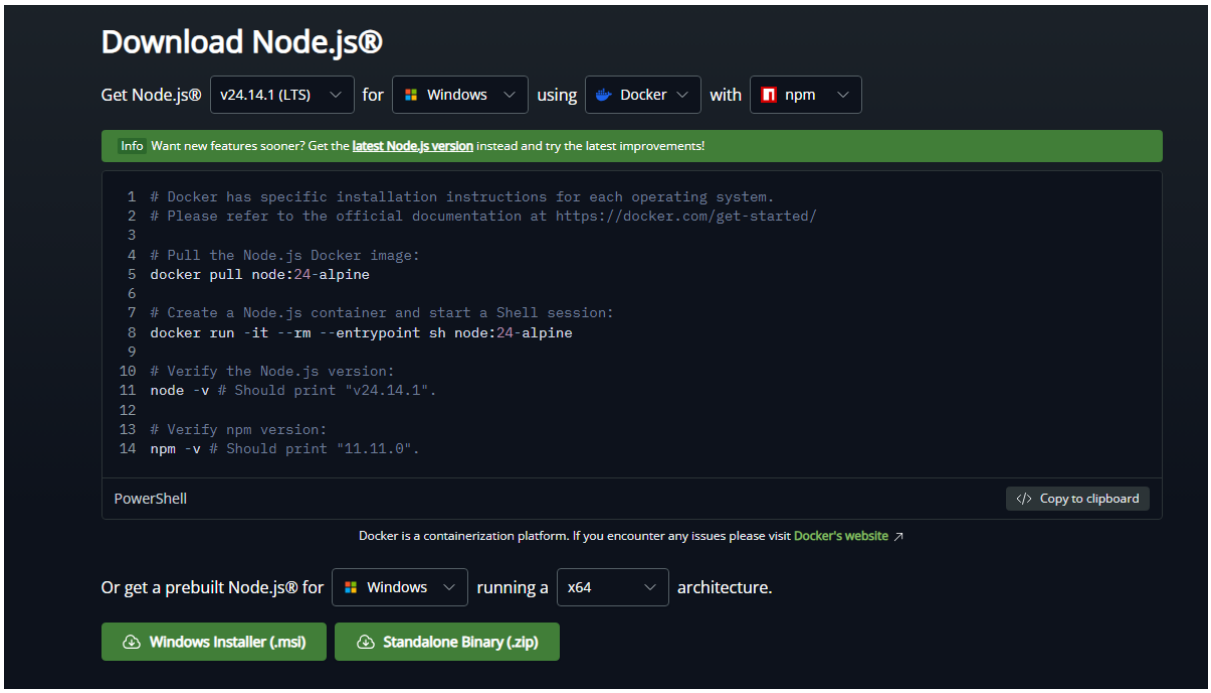
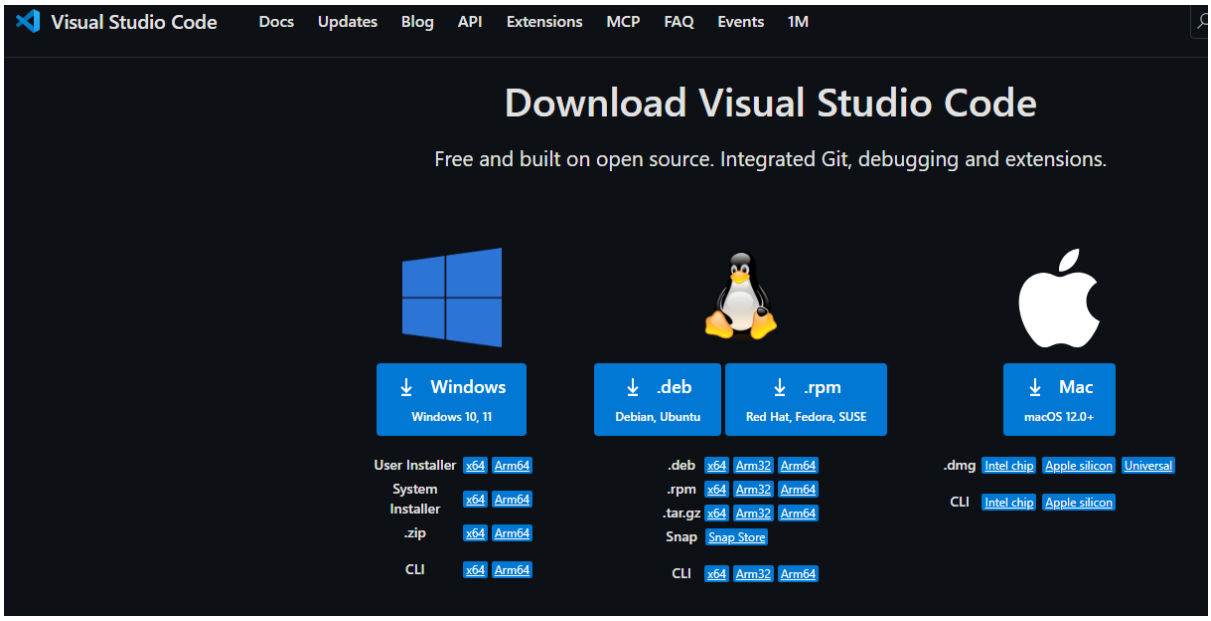
For the HMI we use React.js so we use Node.js Visual Studio Code to run it

First download Node.js v24.1.4.4.1 (LTS) and then Visual Studi Code

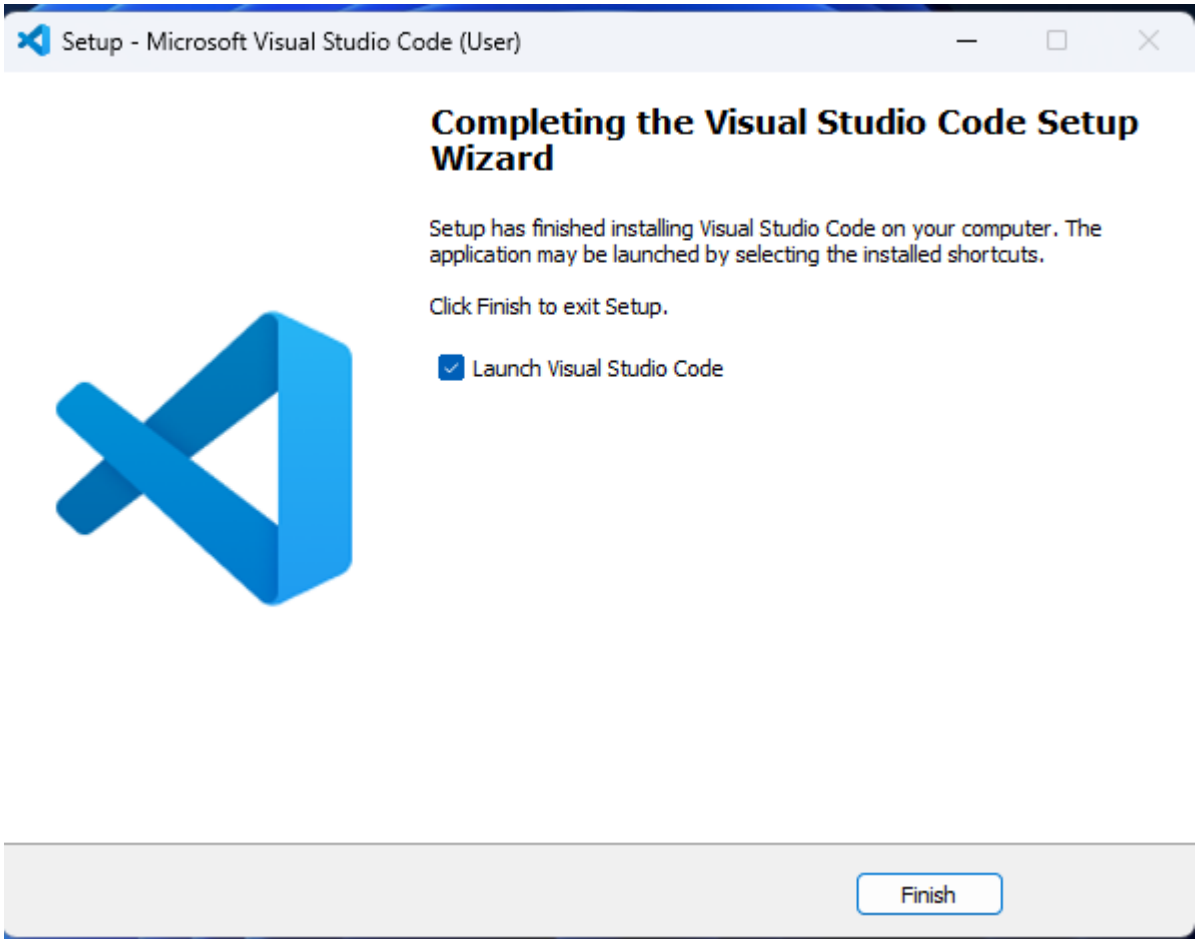
Download link: https://nodejs.org/en/download



Download link: https://code.visualstudio.com/download

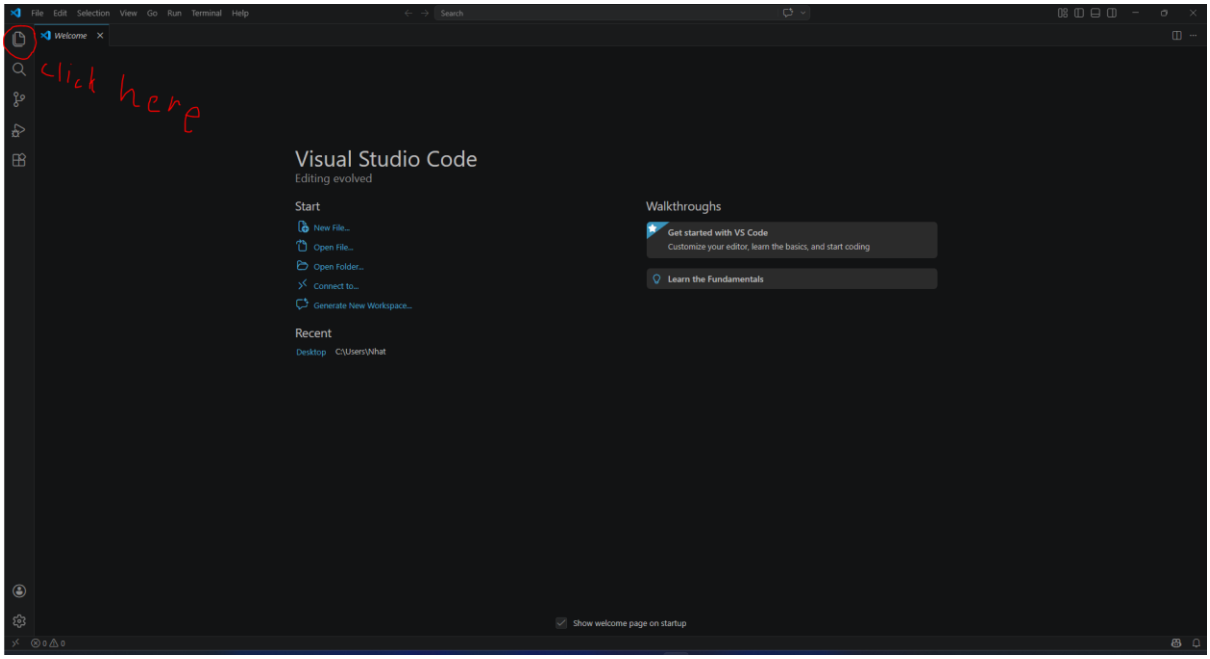


Next click on the seyup file, install follow the instruction of setup (just click next all of the time).

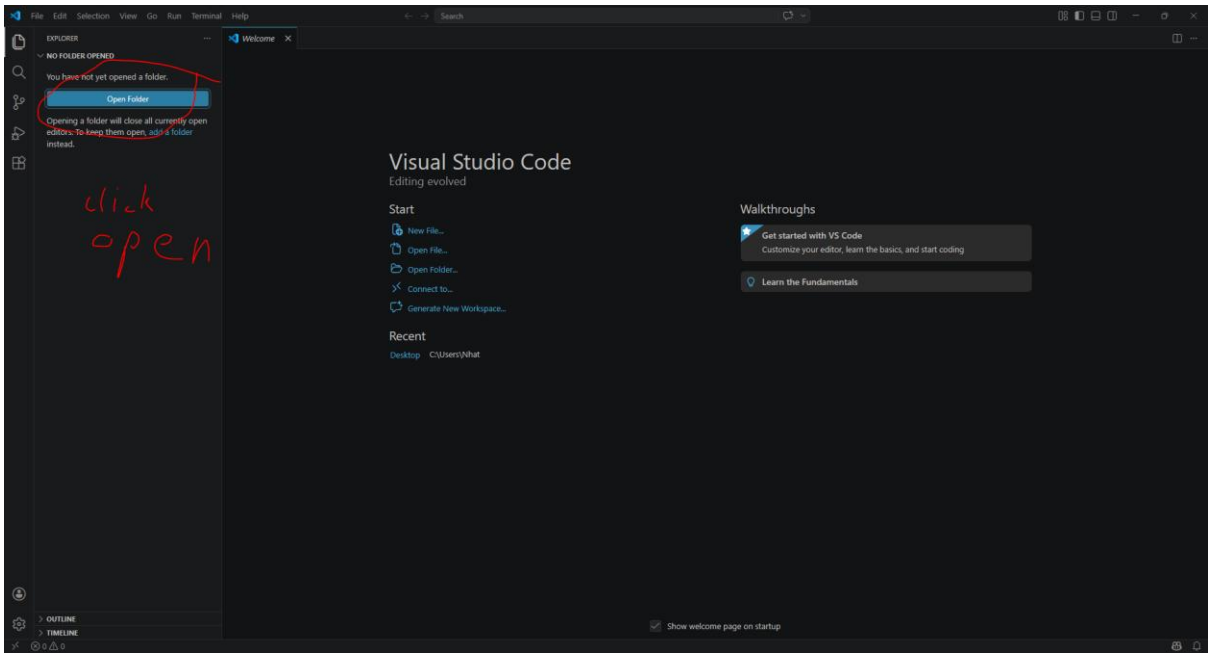


Click finish when you see the window above,

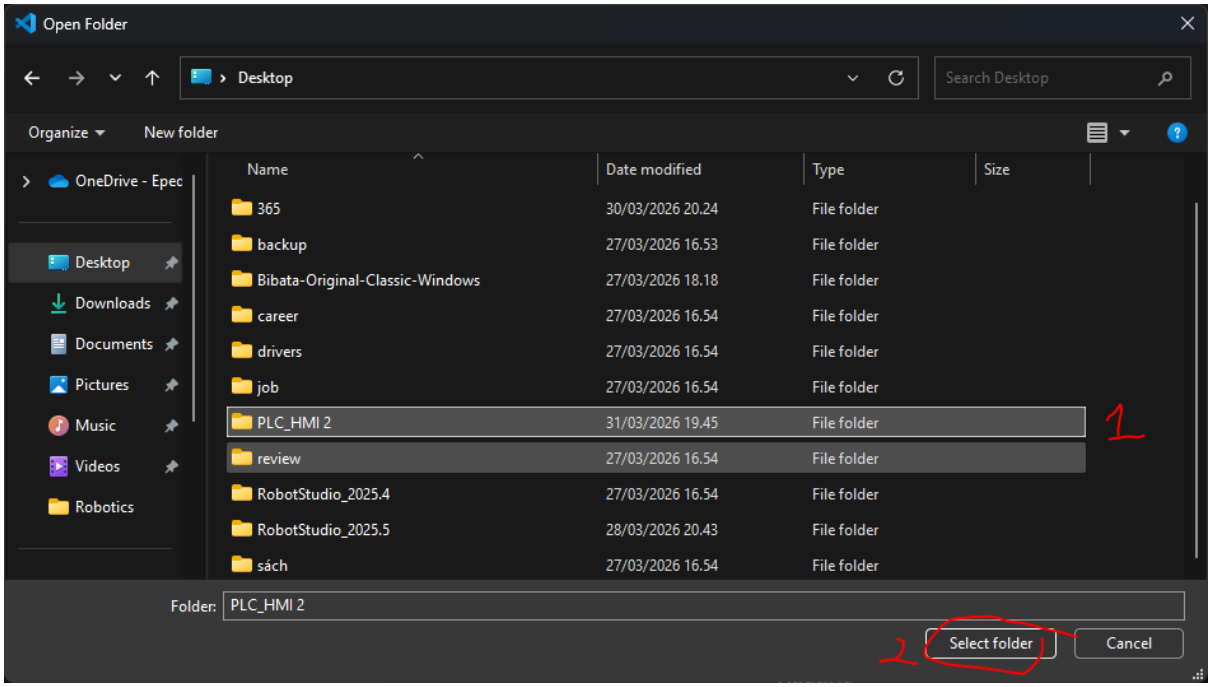
Then you see the window below, and click at the button that I circle in red



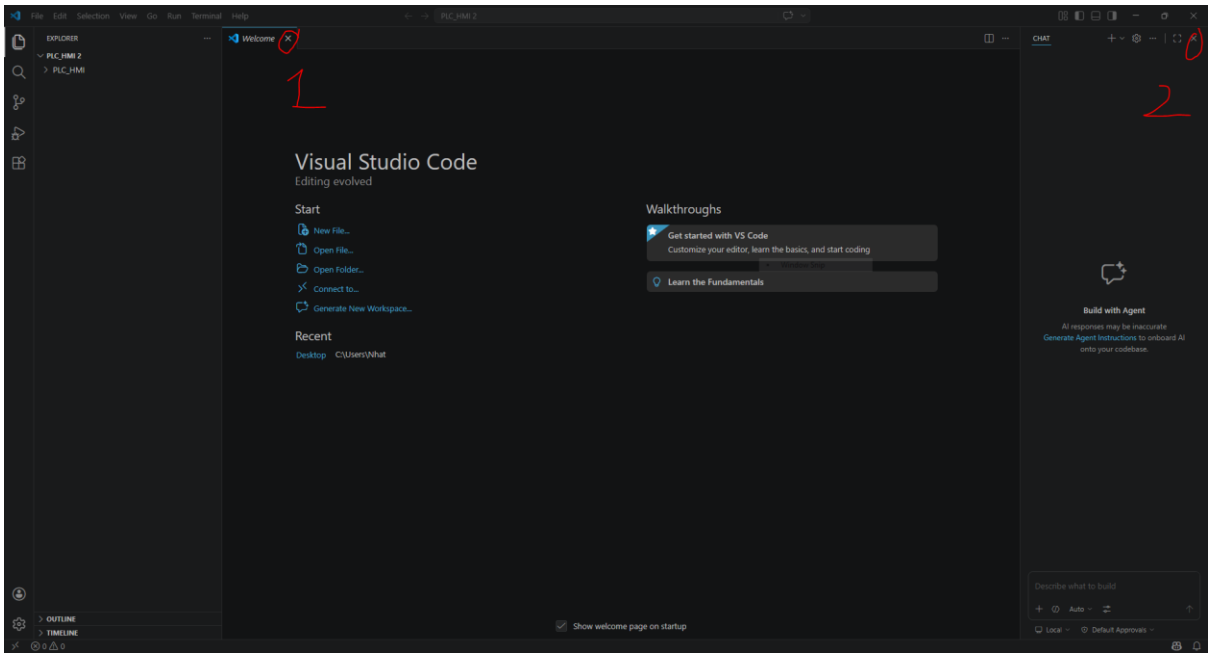
Then click open



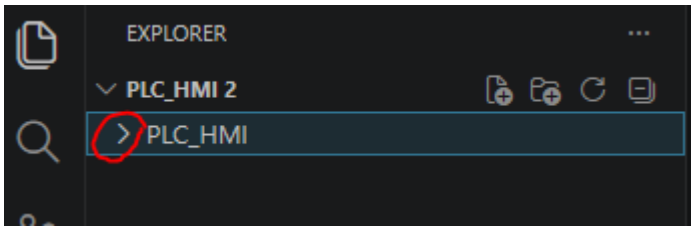
Then choose our file PLC_HMI 2 (you have to extract the zip file first)



Click follow as the picture to close unnecessary window

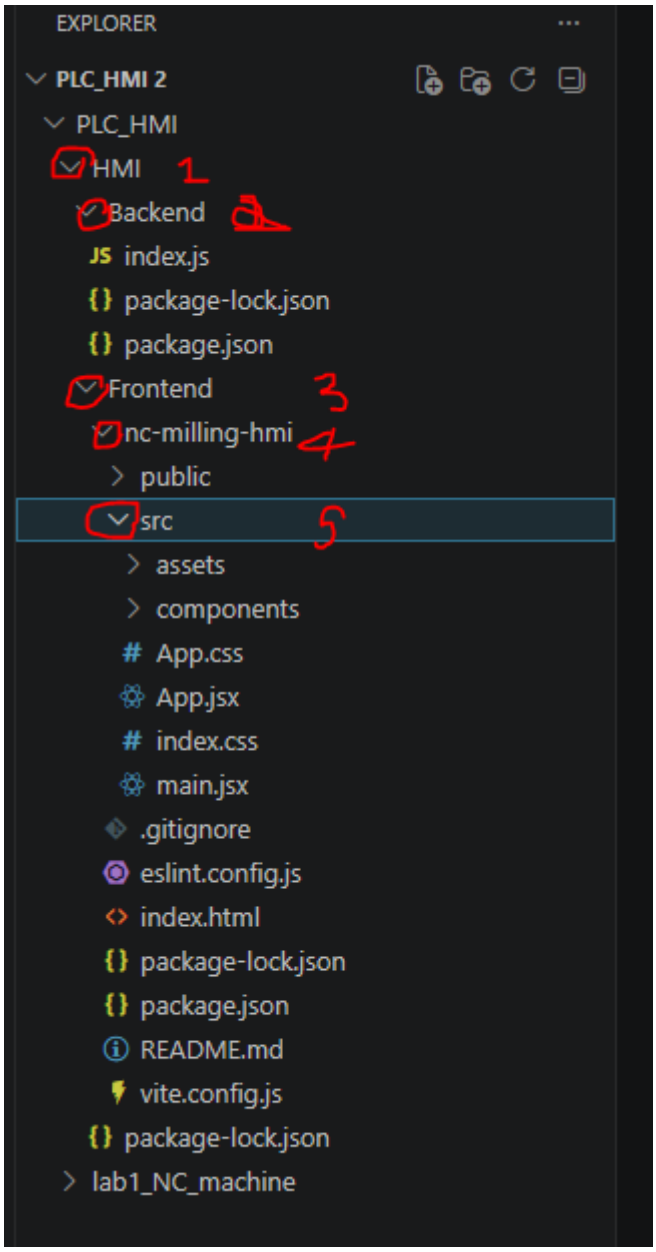


Look at the top left, click on > PLC_HMI

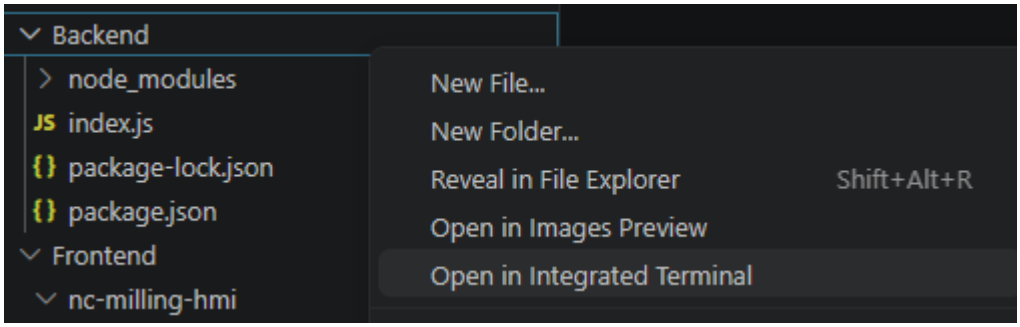


Then click as follow order:

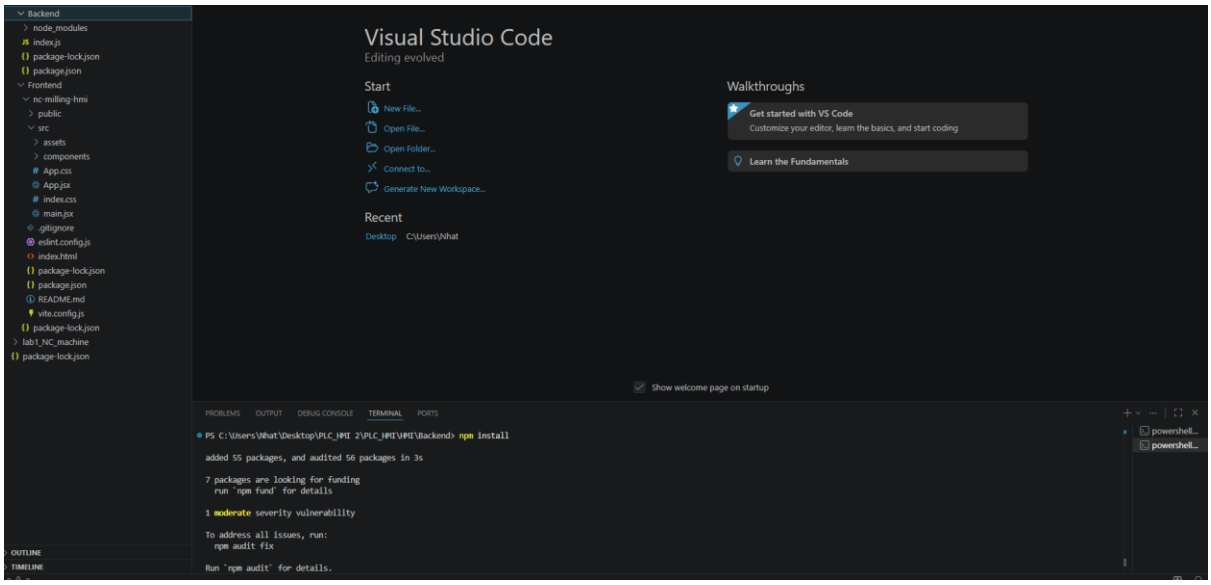
HMI -> Backend -> Frontend->nc-miling-hmi->src



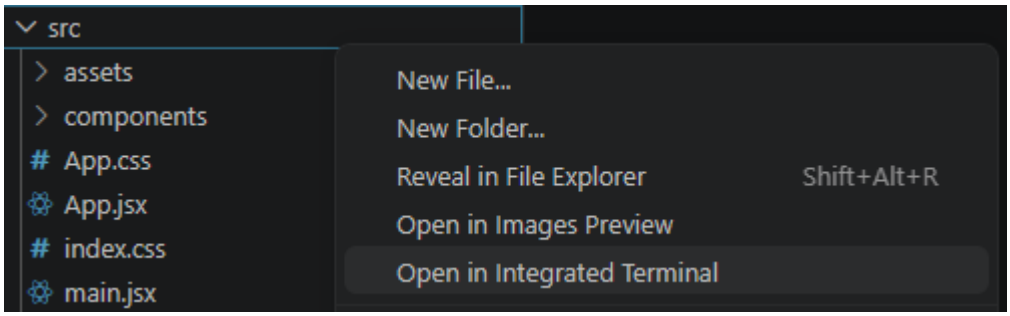
Then right click on Backend folder, and choose Open in integrated Terminal

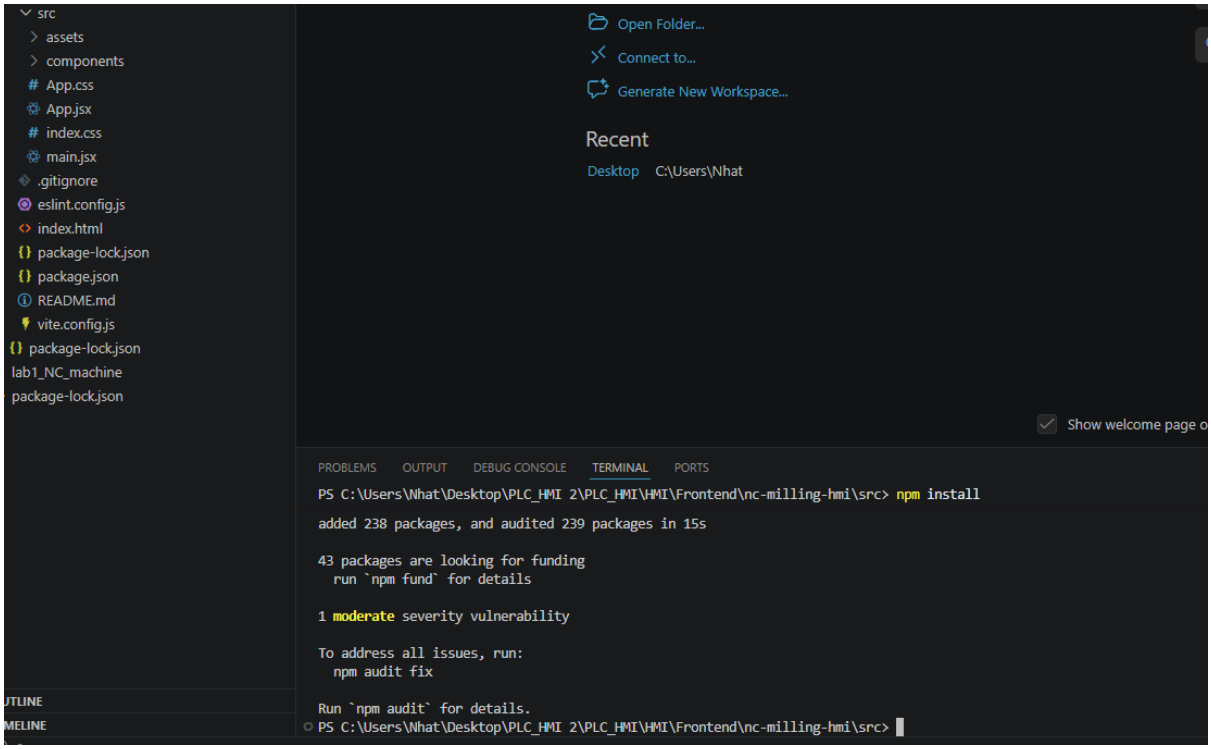


In the terminal type npm install

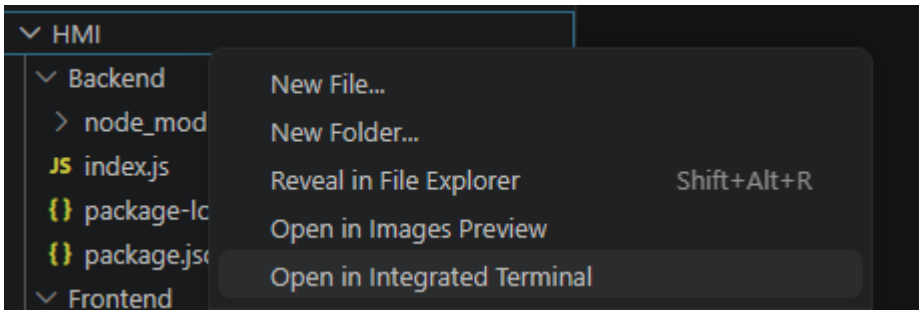


Do the same with folder src

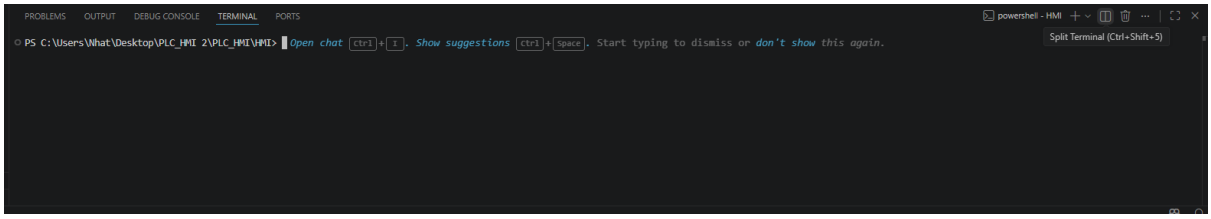




Then right click on HMI folder: choose Open Intergrated Terminal

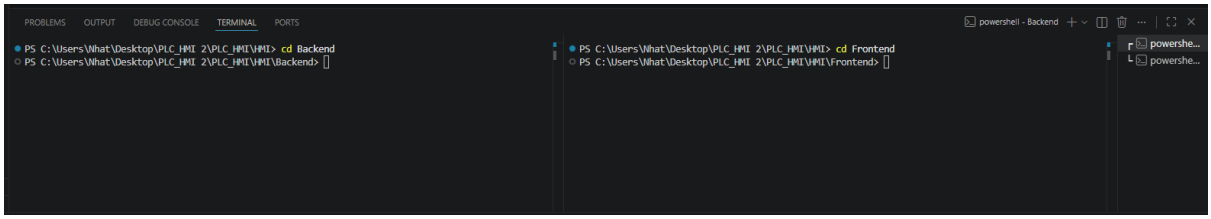


Then click split terminal

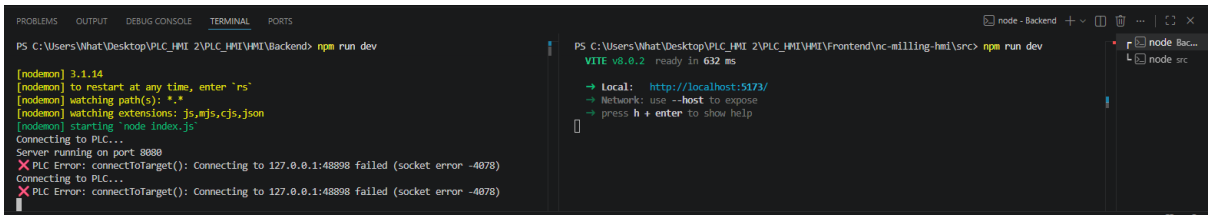


At the left terminal type: cd Backend

At the right terminal type: cd Frontend\nc-milling-hmi\src



At both Terminal type npm run dev



Then click on the link: http://localhost:5173/ this is the HMI.

You have to login run mode in TwinCAT to connect the Backend with PLC.
